a

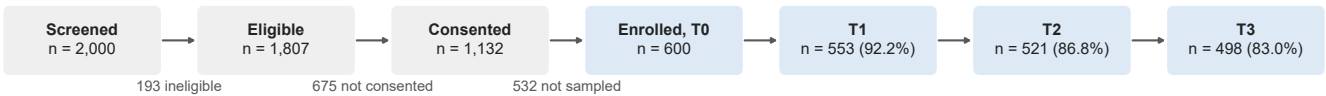

Each visit: 5 min adaptation → 5 min resting ECG → 8 min resting EEG (eyes open and closed, random order) → 5 min serial subtraction → 5 min recovery → questionnaires → blinded clinician interview

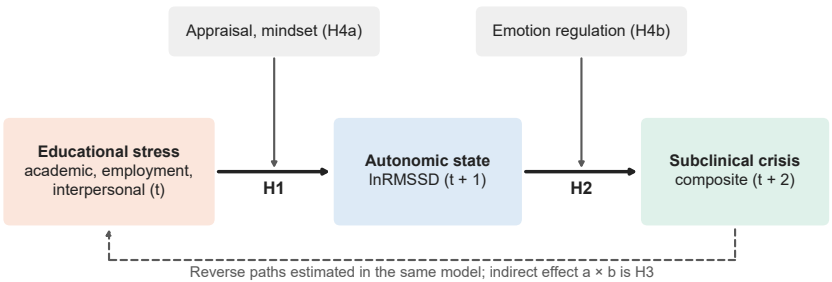

b

Measure	Instrument and setting	Core (n = 300)	Extended (n = 300)
Resting ECG, lnRMSSD	BIOPAC with ECG100C, lead II, 1,000 Hz	All waves	T0, T3
Resting EEG, posterior alpha	actiCHamp Plus, 32 channels, 1,000 Hz	All waves	–
Nocturnal RMSSD	Oura Ring 4; Polar H10 in 40 core participants	All waves	All waves
EMA, passive sensing	mindLAMP, 3 prompts per day	All waves	All waves
Self-report	Stress scales, PHQ-9, GAD-7, DASS-21	All waves	All waves
Clinician rating	CGI-S, C-SSRS, blind to devices	All waves	All waves
